

Back-End Developer

Back-End Developer

Summary:

We are seeking a Back-End Developer to manage the interchange of data between the server and the users.

Responsibilities:

- Develop server-side logic, definition, and maintenance of the central database.
- Ensure high performance and responsiveness to front-end requests.
- Integrate user-facing elements developed by front-end developers with server-side logic.

Requirements:

- Experience in server-side languages like Node.js, Python, or Java.
- Understanding of REST APIs and database technologies (MySQL, MongoDB).

Preferred Skills:

- Familiarity with cloud platforms like AWS or GCP.
- Experience with Docker and CI/CD pipelines.

Location / Type:

New York, NY / Hybrid
